DEMO RENDU

École 2600 – 3D soutenance template

github.com/johnfr15

john@2600:~/renduz/demo\$

01 / ARCHITECTURE

A small stylized infrastructure, modeled in `scene.js` :

- `gateway` – entry point, exposed to the internet
- `firewall` – filters everything crossing the stage
- `api` – three service towers
- `db` – the stacked data store

Each next slide flies the camera to one of them.

john@2600:~/renduz/demo\$

02 / GATEWAY

The **gateway** is the only component facing outside.

- Terminates TLS
- Routes by hostname
- Watch the packets leaving it on the cables

john@2600:~/renduz/demo\$

03 / FIREWALL

Every packet crosses the **firewall** wall.

```
default: DROP
allow:    443/tcp → api
allow:    5432/tcp api → db
```

john@2600:~/renduz/demo\$

04 / API SERVERS

Three **api** towers behind the wall.

- Stateless, horizontally scaled
- The glowing stripes are very scientific load indicators

john@2600:~/renduz/demo\$

05 / DATABASE

The **db** keeps the state – stacked disks, classic icon style.

- One writer, replicas below
- Only reachable from the api segment

john@2600:~/renduz/demo\$

FIN
